

Pathfinder™

Surface Imaging Technology

See Results.

With Optisolve's Pathfinder™ Surface Imaging Technology facility managers and cleaning teams have a powerful tool to assess surfaces for contamination. Enabling users to see the risk and take corrective action for improved environmental monitoring, assurance, facility performance and health and safety standards.

How Pathfinder Works.

Using the halo affixed to the mobile tablet, the device is set up in front of the desired surface for testing. Pathfinder's software walks users through a step-by-step, easy to follow process on screen. Users will apply our proprietary bio-tracker illuminator spray to the desired hard non-porous surface. Pathfinder then processes the surface information into contamination intensity maps, providing visual images and scorecard results in real-time.

These color-coded results are stored in our SAVI® cloud-based quality management system and can easily be downloaded and shared to help facilities locate and address issues, improve training, and develop precision cleaning programs for efficiency and effectiveness.

What you see

What we see

Create process, protocols and programs designed for facility confidence.

Optisolve's smart technology equips facility teams with a precision cleaning approach to optimize resources, monitor and measure performance, and gain quality improvement for health, safety and hygiene outcomes.

Stop costly outbreaks before they shut you down.

With Optisolve, complex health, education, event and commercial facilities can detect issues of contamination and determine how best to clean for health and monitor for facility confidence.

Remove wasteful practices.

Optisolve is a tool for increasing sustainability. Enabling teams to monitor, improve and optimize the use and application of cleaning chemicals for healthier working environments. All while also helping sustain labor usage and budgets.

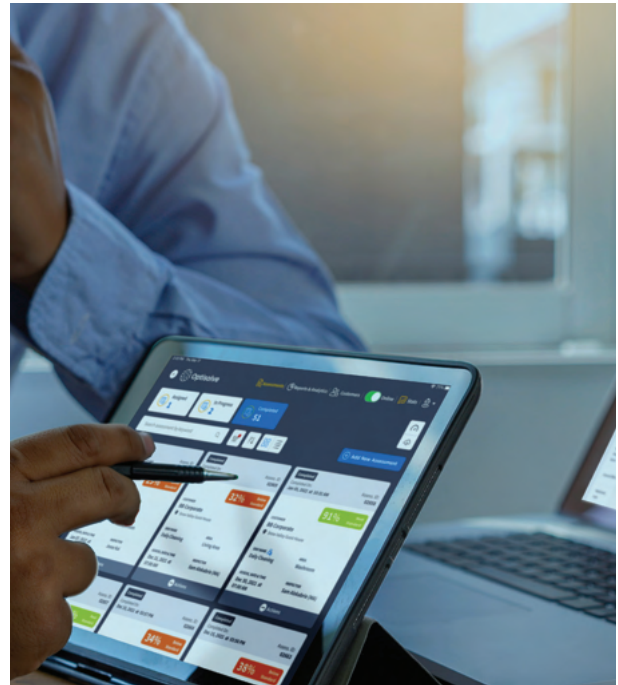

Use data to drive effective decisions for resources, investments and performance outcomes.

Teams can create cleaning assessments that sparkle with visual data and actionable feedback, on-site, in seconds, where learnings can be applied instantly.

Smart Technology

Pathfinder™ uses our SAVI® software to process the images. Results are provided in both digital dashboards and PDF report formats. The combination of Optisolve Pathfinder™ and Optisolve SAVI® provides an auditing system to efficiently automate, assess, analyze and communicate results to assure productivity for clean, healthy, safe spaces.

Our comprehensive platform gives customers the technology and tools for enhanced precision cleaning. Taking the guesswork out of the cleaning process, reducing overall time and risk.

Clean Smarter
